Natalia Ananeva

QA Engineer

As a results-driven and highly motivated QA Engineer , I bring a unique perspective to software development projects. I have a proven track record in creating comprehensive test documentation, conducting software tests, and analyzing customer feedback to identify areas of improvement. My sociability, attentiveness, and detail-oriented approach enable me to effectively manage my responsibilities and consistently achieve outstanding results. With experience in utilizing tools such as Jira, Confluence, TestRail, Postman, SoupUI, MySQL, Git, Android Studio and experience with Python, I am confident in my ability to provide valuable contributions to any project.

EDUCATION

Software Testing Mentoring Programm
EPAM UpSkill Me
12/2022 - 02/2023

Dentistry
Pavlov First Saint-Petersburg State Medical University
09/2015 - 06/2020   *Saint-petersburg, Russia*

WORK EXPERIENCE

QA Engineer
BALMYCOFFEE
09/2022 - Present
Tasks

- Reviewed product specifications and requirements to ensure adherence to customer needs.
- Utilized various test design techniques, including equivalence partition and boundary values, pairwise testing, state-transition testing, scenario-based, and checklist-based techniques.
- Developed a comprehensive test plan and created test cases based on the identified test design techniques.
- Conducted run-time testing to ensure that software products met the desired requirements and specifications.
- Used Confluence and Excel for documentation and MySQl workbench for work with databases.
- Conducted API testing using Postman to test RESTful APIs.
- Analyzed test results and identified areas of improvement, including defects and performance issues.
- Collaborated with developers and product managers to ensure that defects were properly addressed and resolved.
- Participated in Agile development processes, including sprint planning, stand-up meetings, and retrospectives.

Dentist
LLC Belaya Medveditsa
07/2019 - 04/2023
Tasks

- Conducted comprehensive oral exams and administered diagnostic tests to inform treatment decisions.
- Managed patients using testing procedures to monitor disease progression and evaluate the effectiveness of treatment.
- Collaborated with dental specialists sharing test results and treatment recommendations.
- Utilized digital technologies, including electronic dental records and imaging software, to manage test results and improve patient care.
